

# CYBERASSIST™

*Platform-as-a-Service for centralized Cybersecurity Program  
and Compliance Management*

CyberAssist™ is a centralized and easy to use Cybersecurity program and Compliance Management platform-as-a-service designed to simplify the creation and management of cybersecurity programs and compliance initiatives. CyberAssist provides a centralized framework that includes all you need to get your initiatives up and running quickly, easily and securely.

CYBERASSIST™ reduces time and effort spent creating, managing and responding to regulatory requests by 80%.

Compliance is costly in terms of the time and resources it takes to achieve and maintain. This process is made even more complex with most regulatory bodies requiring a robust cyber-security program with breach response. The CyberAssist™ platform reduces your time to compliance by providing you with all you need to get up and running quickly. A full set of policies and procedures tailored to your organization, a team of cyber-security and compliance experts when needed, automated assignment and reminders of the tasks necessary to achieve and maintain compliance, integrated employee training, and breach reporting and response, all in a secure, repeatable and defensible manner.

## HOW DOES CYBERASSIST™ BENEFIT CORPORATIONS?

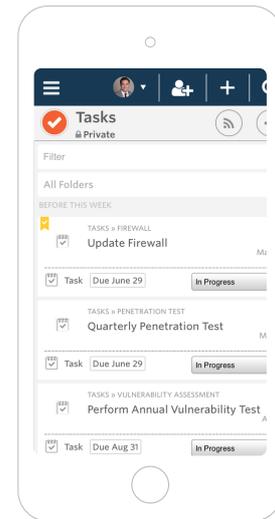

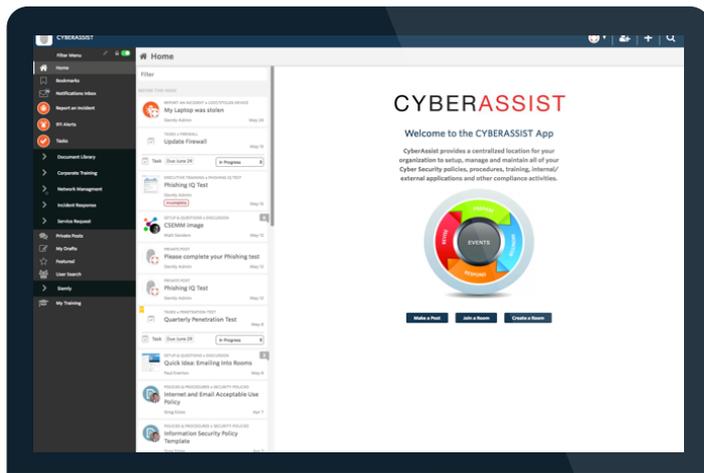

- Realize instant value with customized compliance templates and workflows to get you started on the road to compliance quickly.
- Provides a complete set of policies and procedures that can be easily customized to your organization.
- Reduces risk, cost and response time by centralizing cyber-security event management.
- Delivers real-time access and visibility into your compliance efforts and breach responses making regulatory requests easy.
- Establishes a secure email alternative to collaborate and communicate with both internal and external parties limiting the impact of a breach when it occurs.
- Provides 3rd party supplier management to ensure regulatory compliance.
- Minimizes cost and impact of breaches with the ability to submit, remediate, respond & report security breaches quickly and easily from anywhere, anytime.
- Includes a robust training module to train and test your employees on your policies and procedures to ensure adoption.
- Centralizes all internal and external security applications.
- Demonstrates to auditors, regulators, and their customers a strong commitment to compliance and security.

## Reduce Risk, Cost and Incident Response Time

Cyber-security is complex. Multiple functional units, external resources and systems are almost always involved. Using CyberAssist™ as your single unified cyber-security and compliance management platform makes it easier and more efficient for relevant stakeholders to be automatically notified of an event, manage breaches, communicate securely and assess impact – thereby quickly mitigating further potential damage. Risk is further mitigated because corporate response teams can quickly take action and oversee the response and reporting of breaches to law enforcement and regulatory authorities.

## Demonstrate Defensible Security and Compliance

CyberAssist™ organizes and tracks every step of the process and stores all the information in a centralized secure repository and facilitates seamless response to regulatory compliance audits or investigations. With CyberAssist™ you can easily prove that reasonable efforts have been taken to prevent breaches by showing when and what policies and procedures were published, how you took steps to train your employees and how you adopted an incident response plan by implementing the platform..

## Protect Sensitive Communications from Hackers

Communication regarding breach response needs to be protected. The CyberAssist™ platform delivers a secure off-band communication method for all parties involved, grants role-based access to all pertinent data and allows teams to work together and communicate effectively. CyberAssist™ provides peace of mind that all cyber event communications from within the platform are secure and may be protected by attorney-client privilege.
